

Hack Arizona

The Largest Hackathon in the Southwest

650+ Hackers
6:1 Hacker to Mentor Ratio
January 22nd-24th, 2016
The University of Arizona

Hack Arizona is a Talent Pipeline

Hack Arizona is about connecting 650+ of the most motivated and talented undergraduates and graduates from across the country with industry professionals and mentors for a weekend of software and hardware projects.

Hack Arizona attracts some of the most passionate technical students who are engaged with the latest technologies and practices and are actively contributing to the conversation of what the next decade of technology will look like.

Represented schools are based on Hack Arizona I (04/06/2015) registration data.

The Hacker-Sponsor Relationship

As a sponsor of Hack Arizona, you have the opportunity to engage with the next generation of developers, engineers, thinkers and problem solvers and allow them to learn about you and your organization.

Besides providing invaluable support to a crucial avenue of mentorship and experience for a wide demographic of students, sponsors of Hack Arizona:

- Get access to student resumes, code repositories and social profiles.
- Receive Hack Arizona's dataset on student technical skillsets, demographics, experience and backgrounds.
- Have the opportunity to connect with the upcoming developers of their platform or service.
- Get to mentor students: gauge how they learn and seeing what incredible things they come up with over the course of a weekend.

"I can say without a doubt that this was one of the best hackathons I have ever been to."

- Kyle Tyacke, Developer Evangelist at Respoke

"Hack Arizona allowed us to engage students from around the nation, recruit top engineering talent in multiple disciplines, spark innovation and invention amongst the community, and spread awareness of the Raytheon brand, our technologies, and our capabilities."

- Sharon O'Neal, Software Engineering Director at Raytheon

Some of the Awesome People Who Support Us
